## Sack chute cabinet JEL SE-T

Emptying sacks efficiently and safe. Engelsmann sack chutes can be integrated seamlessly into your process.

The sack chute cabinet consists of a housing with door and set-down table and a collection funnel with safety grille and outlet fittings. Various downstream conveyor systems can thus be docked.

Depending on the technical process and the product environment, further components can be added to the station: safety sieve, dosing unit, conveying aids and similar items.

The sack chute cabinet can be equipped with a dust removal filter and fan for particularly dusty products.

The JEL SE-T is available as a mobile version with a frame or can be installed for emptying above mixers or reactors.

### Features of the JEL SE-T

Can be supplied with filter and fan

Version with gloves for manual intervention and viewing window

Interior lighting

Mobile or stationary construction

Large door with gas pressure springs

Also available as a ground or e-polished version

Optional: empty bag ejection

DIN-connection flange for downstream process

Attachment of e.g. safety sieves, crushers, rotary valves, pneumatic conveyor systems

Can be supplied in ATEX construction

## Method of operation of the JEL SE-T

The door of the bag chute is opened manually. The full sack is placed on the support table, cut open and emptied into the collection container.

In case of increased dust generation, filters with fans are attached to the bag chute. Alternatively, the sack chute cabinet can be connected directly to existing dust extraction systems on site via desusting systems.

A protective grille prevents the emptied sack or sack residues from falling into the collection container. The cabin can additionally be equipped with a side empty bag ejector for easy removal of the empty bag.

## Advantages of the JEL SE-T

Space-saving construction

Easy operation and cleaning

Version with gloves for manual intervention and viewing window

Ergonomic design

Dust proof door
